

Microsoft Solver Foundation test results

Nils Fagerberg & Daniel Odenbrand

August 2016

Here we present our runtime statistics when using the Microsoft Solver Foundation to solve random instances of the warehouse problem with different attributes. Every attribute is either of the value 'Low' or 'High'. The first table displays what high and low for the different attributes represents.

Attribute \ Value	Low	High
Demands	Demands on $\frac{1}{4}$ of all products	Demands on all products
Sparsity	No warehouses are empty	$\frac{1}{2}$ of all warehouses are empty
Products	Warehouses have at least 0 of each product	Warehouses have at least $\frac{1}{5}$ of the maximum demand of each product

Furthermore a column having the value '**' means that it did not terminate within a reasonable time frame (>12 hours). A value of '**' means that we did not bother to run the instance at all since the problem is considered harder than a previously unfinished problem.

Size	Type			Branches	Time (s)	Optimal Value
	Demands	Sparsity	Products			
10x10	Low	Low	High	26	0.00100	4
	Low	Low	Low	25	0.17700	4
	Low	High	High	14	0.00000	2
	Low	High	Low	9	0.00000	2
	High	Low	High	13	0.00100	4
